## Tomato

### F-1 Hybrid **DHRUV (1124)**

A semi determinate extra vigorous tomato hybrids with marked LCV. Healthy fruits and productive variety yield for a long period with uniform elliptical is oval shaped glossy, deep red, firm fruits weighing 90 -100 gm. Tolerance to high temperature.

### F1 Hybrid **INDRA (1125)**

Semi determinate, mid-early hybrid with very firm is oval elliptical fruits filled tolerance to LCV, fusarium. Fruits of medium large in size weighing 100-110 maturely 60-65 day.

### F1 Hybrid **AASHA**

Semi determinate, high yielding hybrid. Fruits are Round, firm and average weight 90-100gm. First harvest starts from 60-65 days tolerance to TYLCV and Leaf spot. good for long distance.

### F1 Hybrid **BHEEMA**

Determinate plants vigorous and high yielding Fruits are flat round, Firm and deep red colour average Fruit weight is 85-90gm, First harvest 55 – 60 days after transplanting

## Hot Pepper

### F1 Hybrid **HHS474**

Plant tall and vigorous hybrid bearing a profusion of pungent green fruits over a considerable long period. Fruits medium sized 8 – 9 cm long and diameter 1.0 – 1.1 cm, moderate resistance to mosaic, LCV and wet Rot. Suitable for long transportation.

### F1 Hybrid **HHS 7888**

Semi erect compact foliage. Dual purpose fruits immature colour shiny green and mature dark red green fruits with semi wrinkled surface having 15 – 16 cm length and 1.1 – 1.2 cm diameter. High yielding hybrid harvesting start from 55 – 60 days, intermediate resistance for CMV & LCV.

### F1 Hybrid **SHAKTI**

Early Medium Maturing, vigorous hybrid with dark green tall plant. Fruits are pungent dark green coloured with wrinkled size 8 – 10 cm in length and 0.8 – 1 cm in diameter. Dry fruit colour red to deep red. First Harvesting 65 - 70 days.

### F1 Hybrid **HHS 8874**

Plant growth habit is bushy much branching. Fruit surface smooth green lustrous. Average fruit length 12 – 13 cm and 1.0 – 1.2 cm diameter good pungency start picking from 60 – 65 day can be used for dual purpose.

## Okra

(OP) BHINDI  
**MAHIMA SUPER**

Plant vigorous and medium tall, leaves lower medium lobed, green in colour, maturity 50 – 55 days. Fruit length 12 – 14 cm with dark in colour suitable for dense sowing.

**SHAGUN**  
(Research)

Plants are medium tall with vigorous foliage very good fruit bearing with dark green color. Fruit length 12-14 cm thin in size early maturity 40–45 days.

F1 Hybrid  
**HS 8815**

Medium maturity with vigorous plant having tolerance to YVMV, Fruits are dark glossy green starts for harvesting with in 45-50 days

F1 Hybrid  
**SAARIKA**

Plants are vigorous short internodal length, Fruits are green with 5 ridged slender. Fruits length 14 – 15 cm. picking strat 45 days tolerance to YVMV.

High Yield Potential, Long Fruiting Window,  
Excellent tolerance towards virus, First Choice of Market

## Cucumber

### F 1 Hybrid **PEPINO**

A very vigorous and high yielding the fruits are cylindrical light green with specks having length of 20 – 23 cm and diameter of 4 – 5 cm. a good disease resistant and heat tolerant variety.

### F 1 Hybrid **VENUS**

Vigorous plant excellent fruit setting medium long fruits of 19 – 20cm. Fruits are green in colour, smooth with spires having crispy test start yielding 38-40 days, excellent shelflife.

### F 1 hybrid **MITRAA**

An early to medium maturing hybrid with vigorous growth habit. Fruits of this hybrid are glossy smooth green in colour with specks. Fruits are 20 – 20 cm in length and 4 – 5 cm in diameter, first picking starts 35 – 40 days. Fruit are good keeping quality, suitable for long distance transportation.

### F 1 Hybrid **PAKEEZA**

An adaptable high yielding variety. Fruits are medium green like desi, crispy, excellent shelf life and shipping ability. Fruit is 18–20 cm long 4–5 cm thick. Early maturity within 35–40 days.

## Watermelon

### F 1 Hybrid **NOOR - 111**

A new ice box type high yielding hybrid, strong plant early maturity, fruits are oval, weight 3.5 – 4 Kg colour is dark blackish green. Excellent TSS about 13% with deep crimson red flesh having crunchy granular texture good for storage and shipment.

### F 1 Hybrid **SULTAN**

Early maturity 65 days ice box hybrid fruits are oblong 3 – 5 Kg kind colour dark green with deep red, firm and granular texture flesh brix value 10 – 11 TSS.

### F 1 Hybrid **MADHU REKHA**

Madhuras type flat round sunred. Maturity earlier than Madhuras as 55-60 days. Fruits have good flesh colour with aroma, having 1-1.25kg weight with 13-15 % TSS

### F 1 Hybrid **MADHURAS**

Vigorous vine, leave entire green pubescent with large petioles. Flattened roundish fruits. rough yellow skin with green strips. Fresh salmon orange in color & rich in flavour. Maturity 60-65 days with 800gm weight & TSS 12%

## Pumpkin

### F 1 Hybrid **VIRAT**

Vigorous plant excellent fruit setting ability and high yielding hybrid. Fruits shape flat round mottle green in color with 3 – 4 Kg weight. Attractive flesh with golden yellow color and fine structure, picking start 80 – 85 days, suitable for storage and long transportation.

## Tinda

### **HHS-11 (OP)**

Vigorous vines, early maturity 38 – 40 days high yielder variety. Fruits are round with shiny green in colour fruit weight 70 – 90 gm.

## Knol Khol

### (OP) **EARLY-111**

Light green leaves, early maturity 45 – 50 day knob whitish green with smooth skin, flattish round shape. Knob size medium large to large. Knob height 80– 85 cm and width 11 – 12cm having soft and crispy internal structure. Variety have good field standing ability and very late pithiness.

## Cabbage

OP  
**EARLY GOLDEN ACRE**

Early maturity, Average head, Weight 1 kg - 1.5 kg, Maturity 60-65 days, Good tolerance against diseases

F1 Hybrid  
**CHAMPION-45**

Very early maturity 50 – 55 days with good field holding capacity i.e. 30 days. Heads are round green in colour, compact with 0.9 to 1.25Kg suitable for close planting due to small frame size.

F 1 Hybrid  
**VEERA-60**

Early maturing, outstanding hybrid, heads are slightly oval round, brownish green. Average head weight 1.20 to 1.50 Kg highly compact and firmness excellent field holding capacity, maturity 60 – 65 days good tolerance against Black Rot. Long stalk makes it fit for high rain fall.

## Bottle Gourd

### F 1 Hybrid **HHS-408**

Plant are high vigorous Fruit shape cylindrical with 35 – 40 cm length. Fruit are Attractive green in colour early maturity in 50 – 55 days. Resistant to Powdery Mildew and Downy Mildew.

### F1 Hybrid **ESHA**

High yielding with similar fruit size 40 -45 cm maturely 60 – 65 days. A beautiful tender and delicate hybrid with shiny green colour. Fruits cylindrical club with putti succulent flesh and flavor.

### F1 hybrid **SURBHI**

Vigorous plant, prolific round fruiting, hybrid combining early maturity uniformity and tenderness. Fruits almost globe with polar and polar with prominent neck. Fruit are shiny green in colour and maturity 50 – 55 days.

### F1 Hybrid **KOMAL**

Plants are sturdy vine, excellent fruiting start between 50 – 55 day. High round fruits with attractive green colour uniform shape and high field.

## Sponge Gourd

F 1 Hybrid  
**SITARA-111**

Cylindrical and elongated fruit shape with dark green in colour medium long in size 20 – 25 cm. high yielding hybrid start harvesting 45 – 50 days.

F1 Hybrid  
**GREEN GOLD**

Fruits are elongated and slim with attractive dark green in colour. Fruit length 25 – 28 cm very prolific fruiting start between 45 – 50 days.

F1 hybrid  
**RANI (White Seeded)**

Good prolific bearing hybrid fruit are light green, cylindrical long and smooth size of fruit 22 – 24cm high yield potential, picking start 47 – 52 days.

## Ridge Gourd

F1 Hybrid  
**ZEENAT**

Fruit elongated and slender, Green in color with prominent ridges fruit length 40 to 45cm hybrid having with adaptability, good keeping quality and high yielding hybrid.

## Bitter Gourd

### F 1 Hybrid **MAHARAJA**

Plant are high vigorous, well spread branching attractive green color fruits with prominent spines, Fruit length 12 – 14cm first picking 45 – 50 days high yielded.

### F1 Hybrid **NANHA**

Excellent adoptability high yielding with fruit size 3 – 8 cm. maturity 40 days good tolerance to common field disease, Fruit color dark green with spindle spiny shape.

### F 1 Hybrid **MAKHMAL**

Smooth green attractive fruit, Good for transportation, High yielding variety, Fruit length 15-20 cm Fruit width 4-5 cm Fruit weight 100 to 125 gm

## Radish

### EARLY 40 DAYS (OP)

Early vigorous straight root in shape Average roots are 18 – 20 cm long. Leaves are short margins folded like palak leaves spoon shaped pure white root maturity after 30 – 35 days.

### CHINESE PINK (OP)

Root colour pinkish red with white flesh, uniform length 20 – 25 cm long with cylindrical bottom, maturity start 45 – 48 days.

### PALAK PATTA (OP)

Pure white smooth roots. Suitable for summer & rainy season soft and good leaves (Palak Patta) row length 25 – 30cm long. Ready for harvest in 35 – 40 days.

### PUSA CHETKI LONG (OP)

Early vigorous straight root in shape. Average root are 25 -30cm long. Maturity of 38 – 45 days pure white in colour suitable for summer & rainy season.

## Radish

### F 1 Hybrid **HIM-222**

Leaves are light green with dorsal and ventral surface thick hairs, roots are elongated white colour, slightly taper tip end. Average root length 30 – 35cm and average root diameter 3.5 to 4cm maturity start 35 – 40 days.

### F1 Hybrid Radish

#### **HIM - 777**

Ready for harvest in 35 – 40 days.  
Soft and Good leaves row length 25 – 30cm long.  
Pure white smooth roots.  
Suitable for summer & rainy season

### Imported Radish **MENO EARLY LONG**

Cylindrical white in color, Root length 40–42cm without root hairs, leaves spread uniform and deeply serrated margin maturity 45 – 50 days. Roots are long & tapering & crispy,

### **HILL QUEEN (OP)**

Roots are long & cylindrical white in color tapering & crispy, root length 38 – 40cm without root hairs, leaves spread uniform and deeply serrated margin maturity 45 – 50 days.

## Carrot

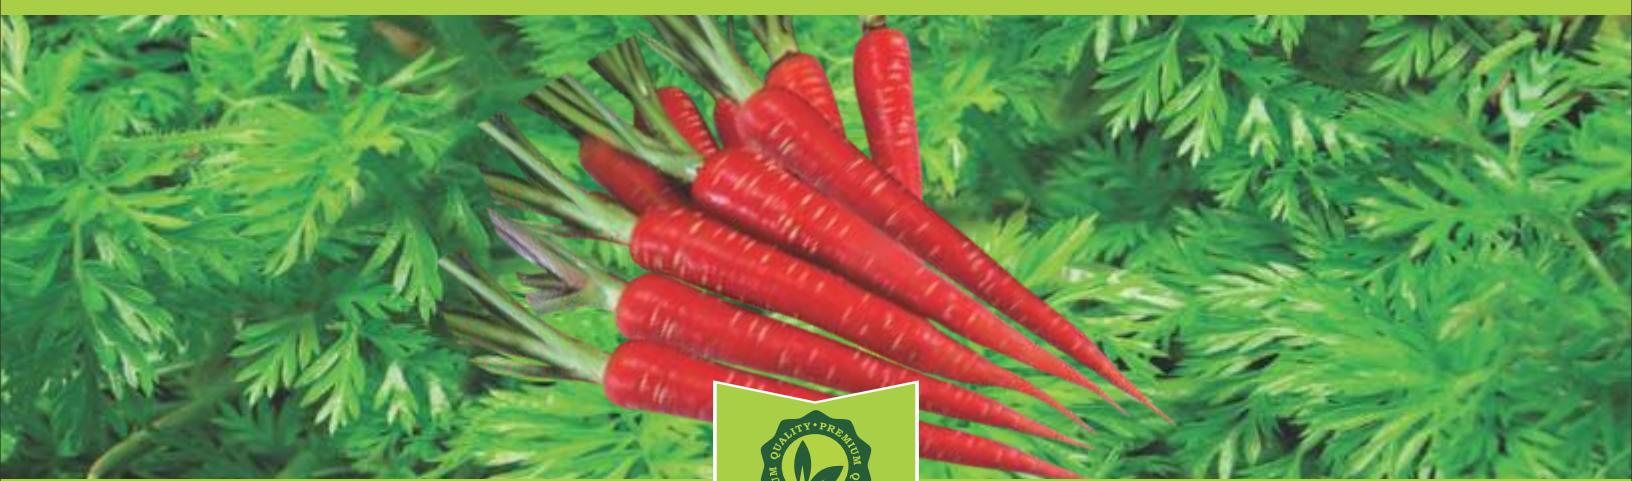

Imported Carrot  
**EARLY NANTES**

Dark green leaves high yielding uniform root 18 – 22 cm length roots are almost cylindrical fine textured flesh of orange colour with self coloured core maturity 100 – 120 days.

Red Carrot  
**SUPER 111 (OP)**

Roots are Tapering, red in colour with small and self colored core fine textured sweet flesh, root length 25 – 30 cm. high yielding variety with earliness maturity 80 – 90 days.

## Beet Root

### F1 Hybrid **HDR-88**

Roots shape full globe with colour deep red skin. Internal flesh dark red without fiber development good field holding capacity maturity 63 – 67 days multi use for processing, bunch and fresh. Low zoning and good bolting tolerance.

### **RUBY QUEEN (OP)**

Roots are Tapering, red in colour with small and self colored core fine textured sweet flesh, root length 25 – 30 cm. high yielding variety with earliness maturity 80 – 90 days.

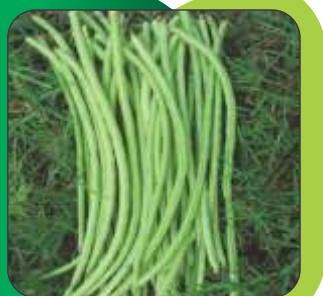

## Cowpea

### **TEJAS-4 (OP)**

Roots are Tapering, red in colour with small and self colored core fine textured sweet flesh, root length 25 – 30 cm. high yielding variety with earliness maturity 80 – 90 days.

### **KRANTI-5 (OP)**

Fruit Light Green, Medium Long, Shiny Fruit  
Bunching Type Fruiting, Fruit is good in taste,  
Good For Long Transportation.  
First Harvest after 48-50 Days.  
High Yielding Variety

### **NIDHI-6 (OP)**

Vigorous plants growth with green foliage coves creeper variety,  
pods are light green, long fleshy cylindrical Harvesting start at 50 –  
60 days.

## French Beans

### PENCIL

Plants are vigorous bushy type high yielding variety pads are dark green lustrous straight cylindrical stringless with 12 – 13 cm length seed white in colour good tolerance to common mosaic virus. First picking start 40 – 45 days.

### LUCKY-111

Bushy type plant early maturity 38 – 40 days. Pods are narrow and very straight cylindrical with 13 – 15 cm length and dark green in colour good tolerance to cold weather.

## Coriander

### **HIM-111 Imported**

Strong growing plant attractive large shiny with bright green succulent leaves & excellent aroma good resistance for bolting& has side branches preferred for multicuts first harvest 30 – 35 days.

### **KIRTI - ALL GREEN**

Plant habit erect uniform green. Harvesting start 30 day having multiple cutting attractive smooth green leaves with 15 – 20 cm length sowing round year expect bolting time in February.

## Palak

## Peas

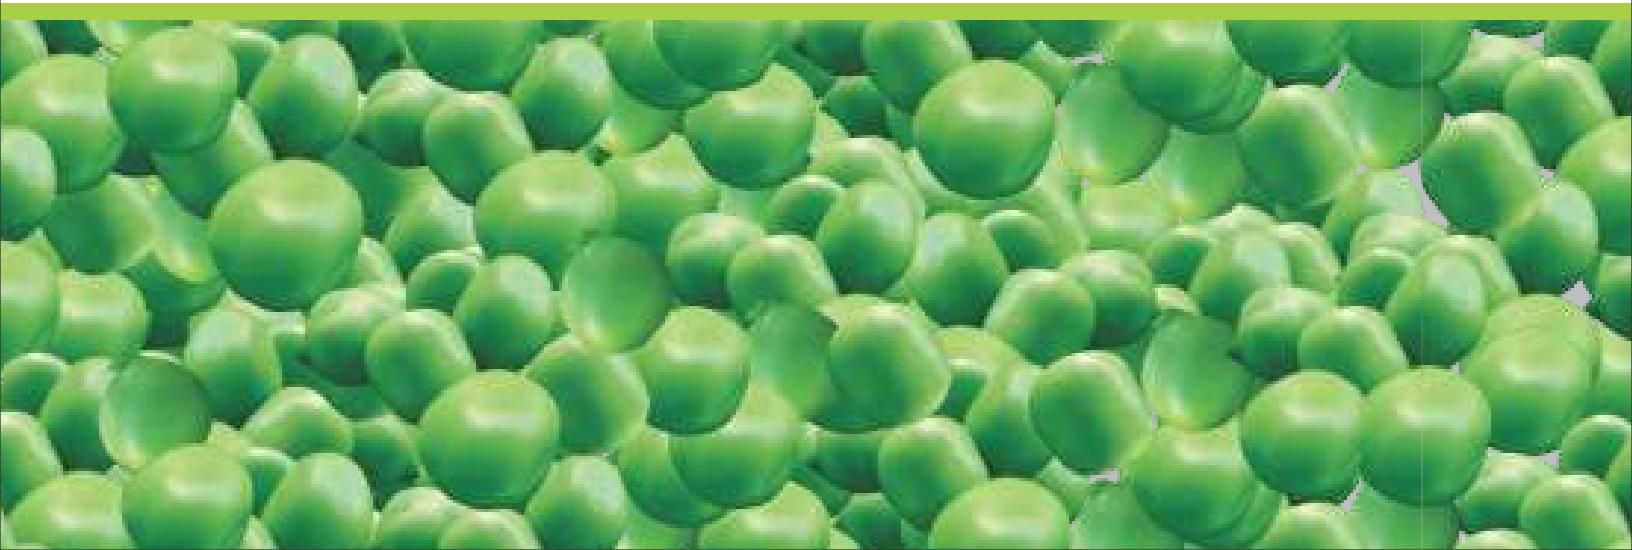

### **HS-10 Imported**

Attractive long green pods with 9 -11 seeds straight pod shape. Plant are dwarf sweet early to harvest high yielding and intermediate tolerance for common diseases.

### **GREEN WONDER (GW-10)**

Early and dwarf sweet peas variety attractive long green pods with 09 – 10 grains.
